

Dasturni otladkalash usullari

M.N.Ikromova

Reja

- 1.VU ni otladkalash.
- 2.Mantiqiy elementlar yordamida dastur tuzish.
3. Ichki VU yaratish va undan foydalanish

VU ni xatoliklari bilan ishlash (otladka)

- Labview dasturida dastur tuzib bo'lgach uni

belgisi yordamida ishga tushiramiz, biroq

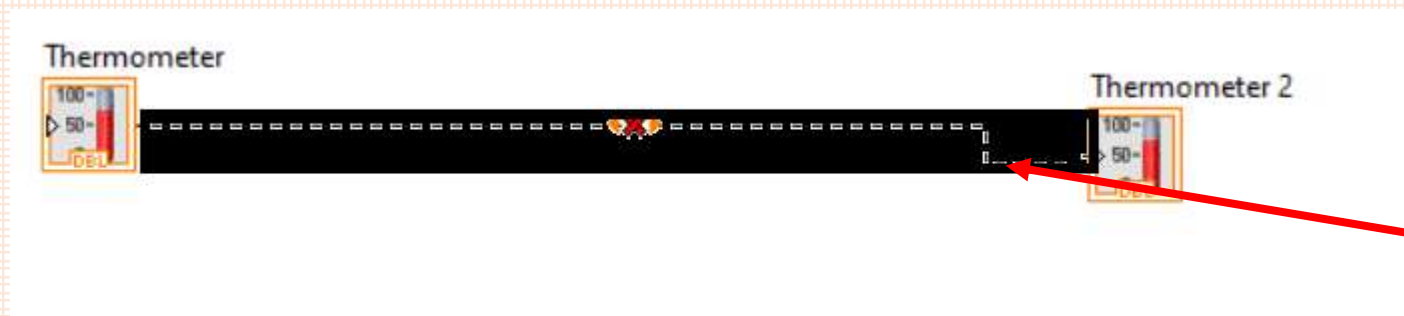

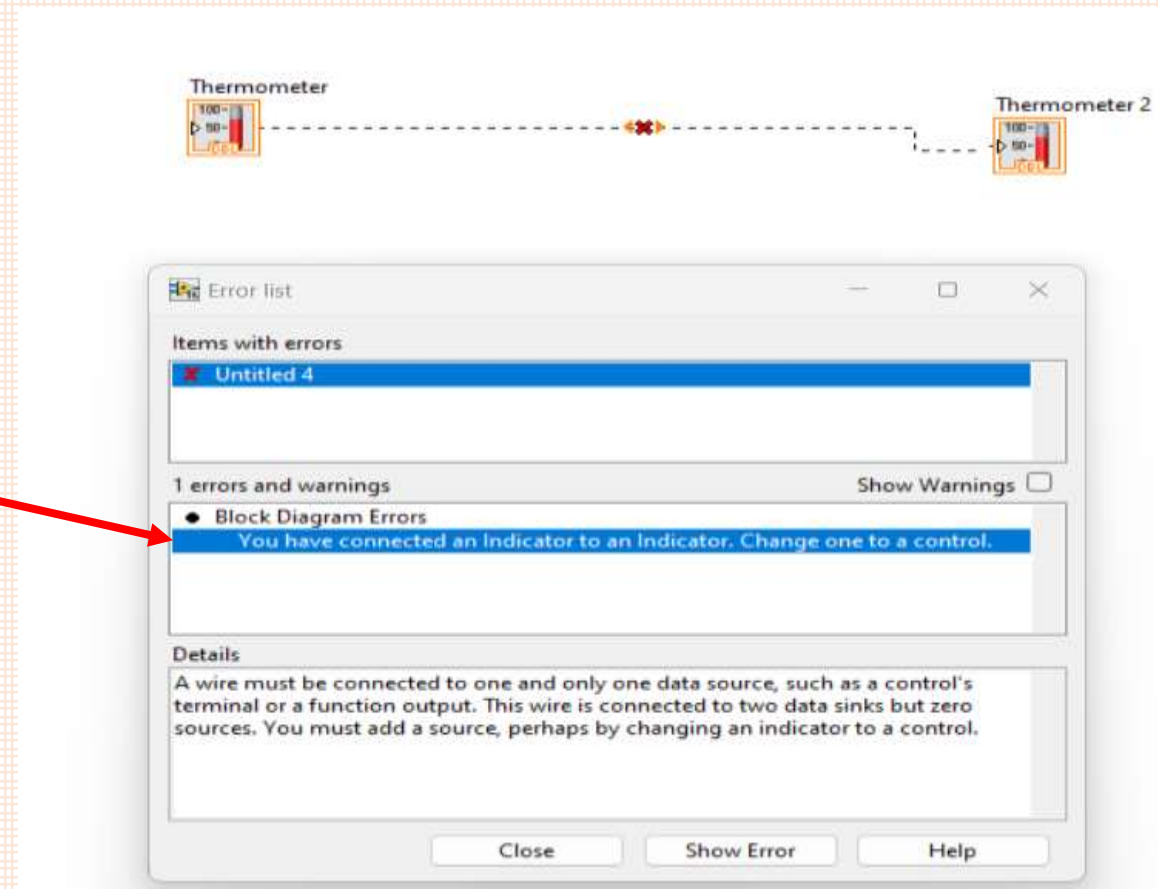

Diagrammalar blokida xató dastur tuzilsa ushbu belgi

ko'rinishda bo'ladi. Bu dastur tuzishda xatolikka yo'l qo'yilganligini bildiradi. Shunda, ushbu belgiga sichqonchani ikki marta chertilsa, **Error list** paydo bo'ladi

- Natijada quyidagi oyna ochiladi:

Ko'rsatilgan xatolik ustida
sichqonchani ikki marta
bosamiz va...

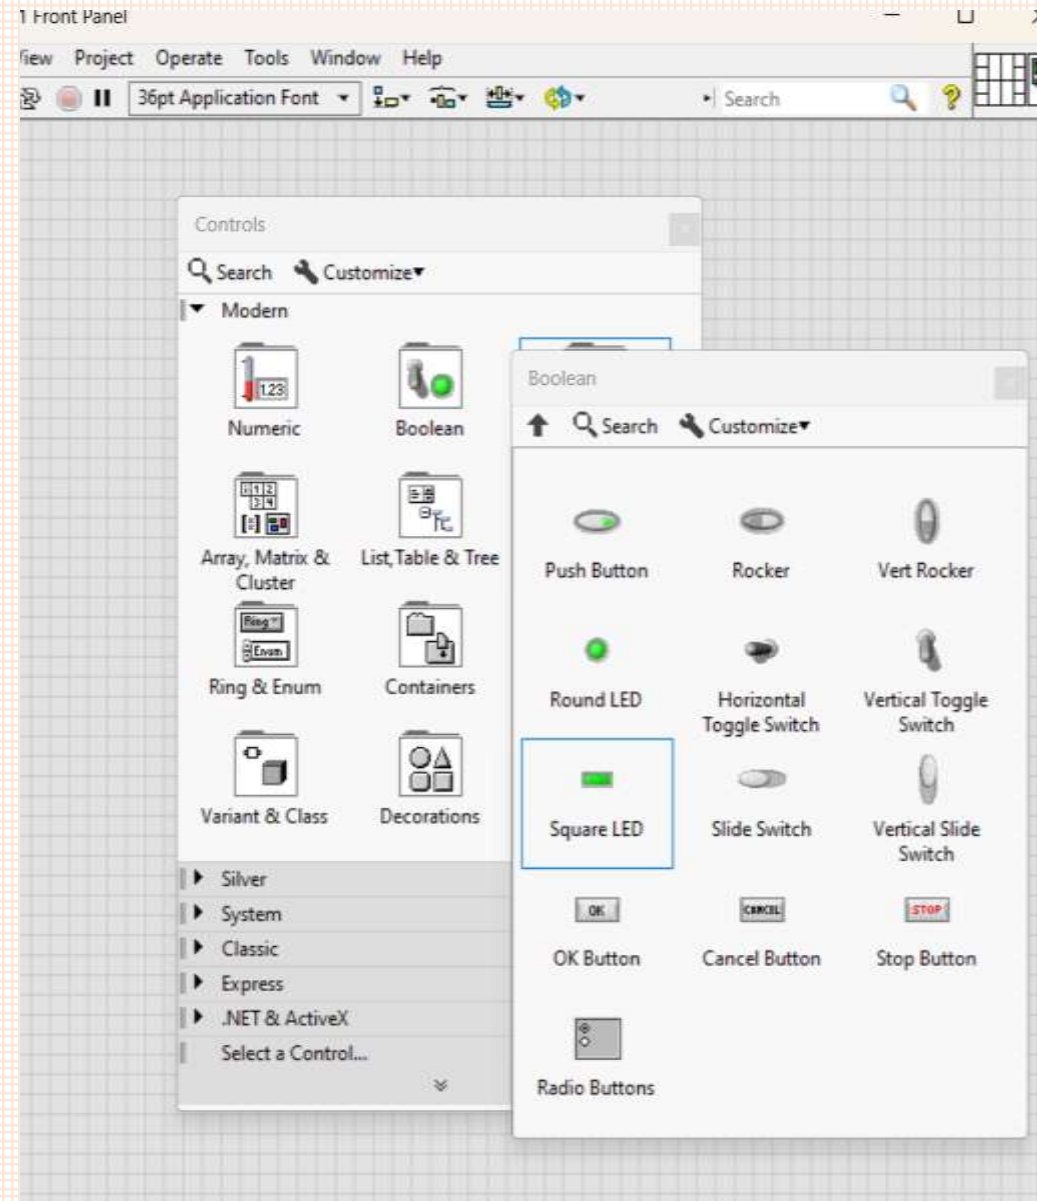

Dasturning xató qismi
qora rang bilan
belgilanib o'chib yonadi

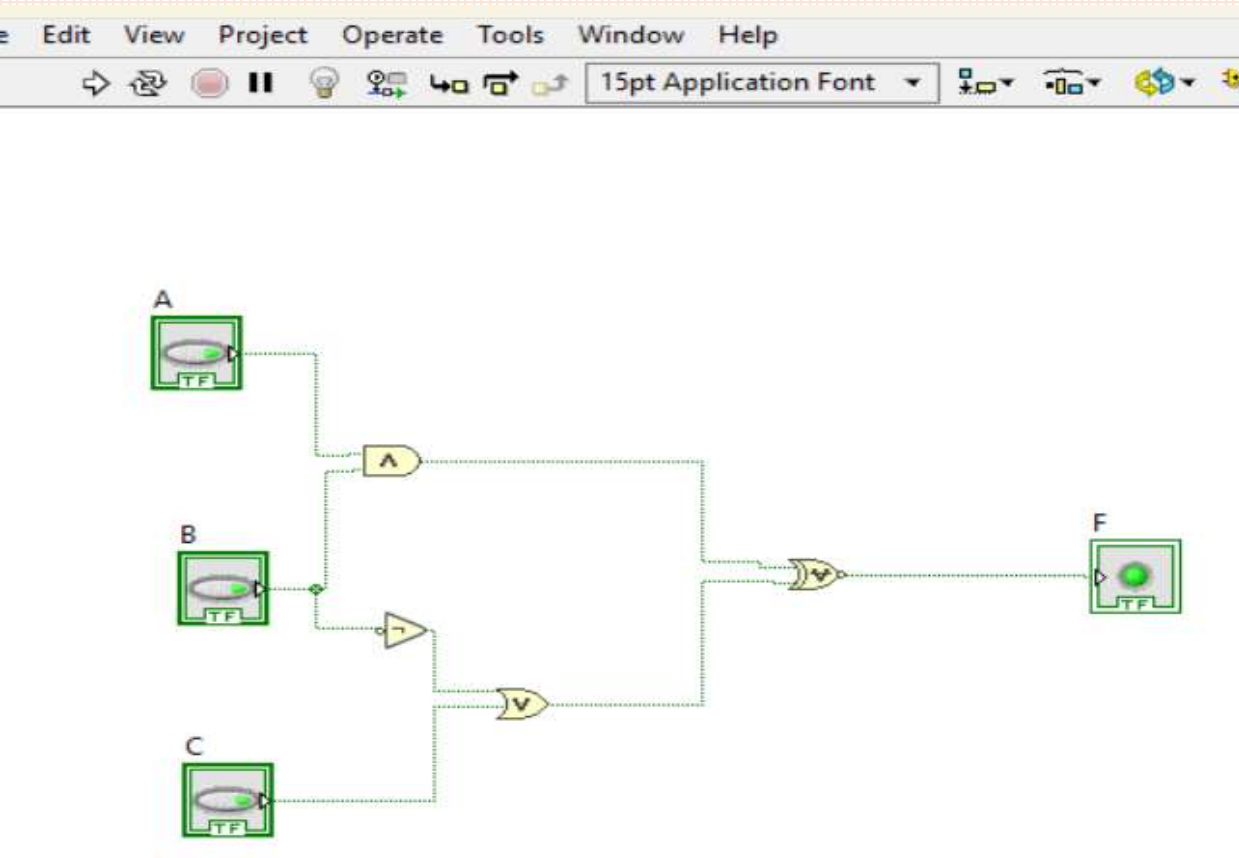

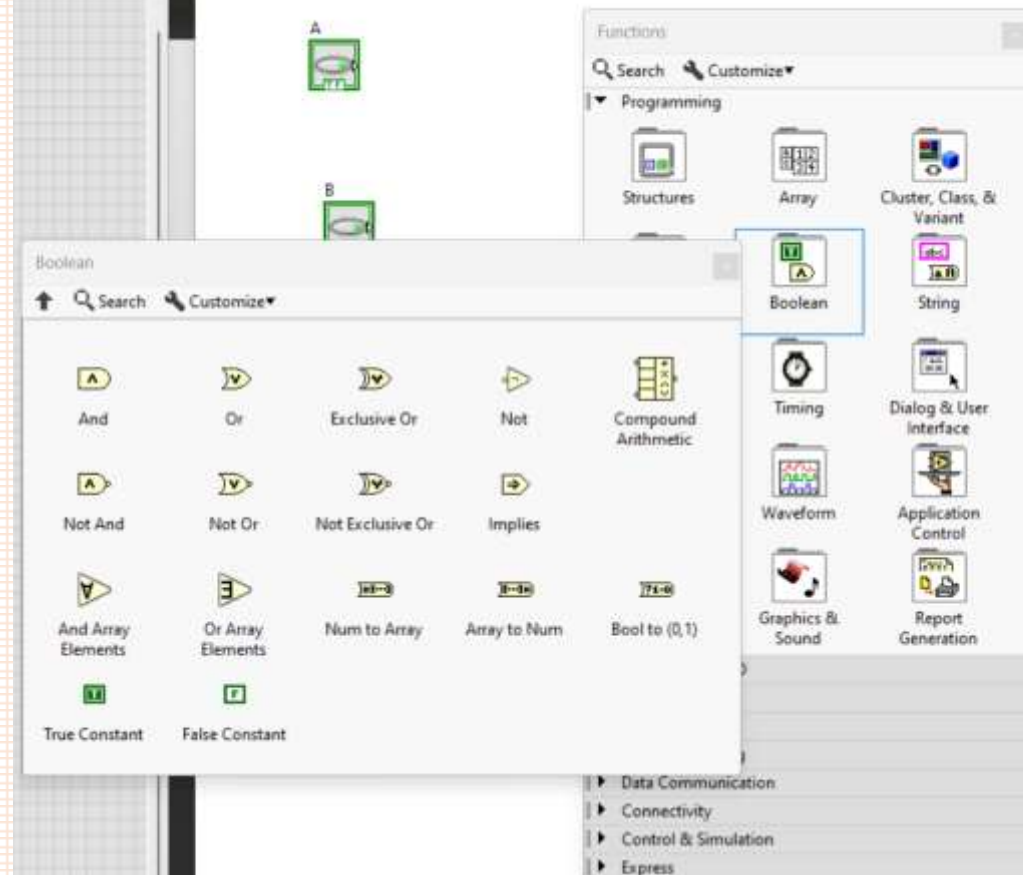

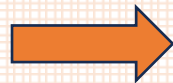

Mantiqiy elementlar yordamida dastur tuzish

$$F = A \wedge B \leftrightarrow \bar{B} \vee C$$

- Ushbu ifoda berilgan bo'lsin.
- Ushbu ifodada 3 ta o'zgaruvchi bo'lib, 3 ta kirishga ega, A,B,C kirish. Shuning uchun **Yuza panelda** ularga mos boshqaruv elementlari hamda indikatorlarni (mantiqiy) tanlab olamiz:
- Controls/Numeric/ Boolean/ Push Button. Demak, Push Buttondan 3 olib, ularni mos ravishda A,B,C deb nomlaymiz.
- Hamda Controls/Numeric/ Boolean/Round Led orqali bitta indikator o'rnatamiz

- **Diagrammalar** **blokida** Functions/Boolean/And, Or, Not, Not exclusive Or kabi tugunlarni mantiqiy ifodada berilgan amallarga muvofiq joylaymiz va ulaymiz.

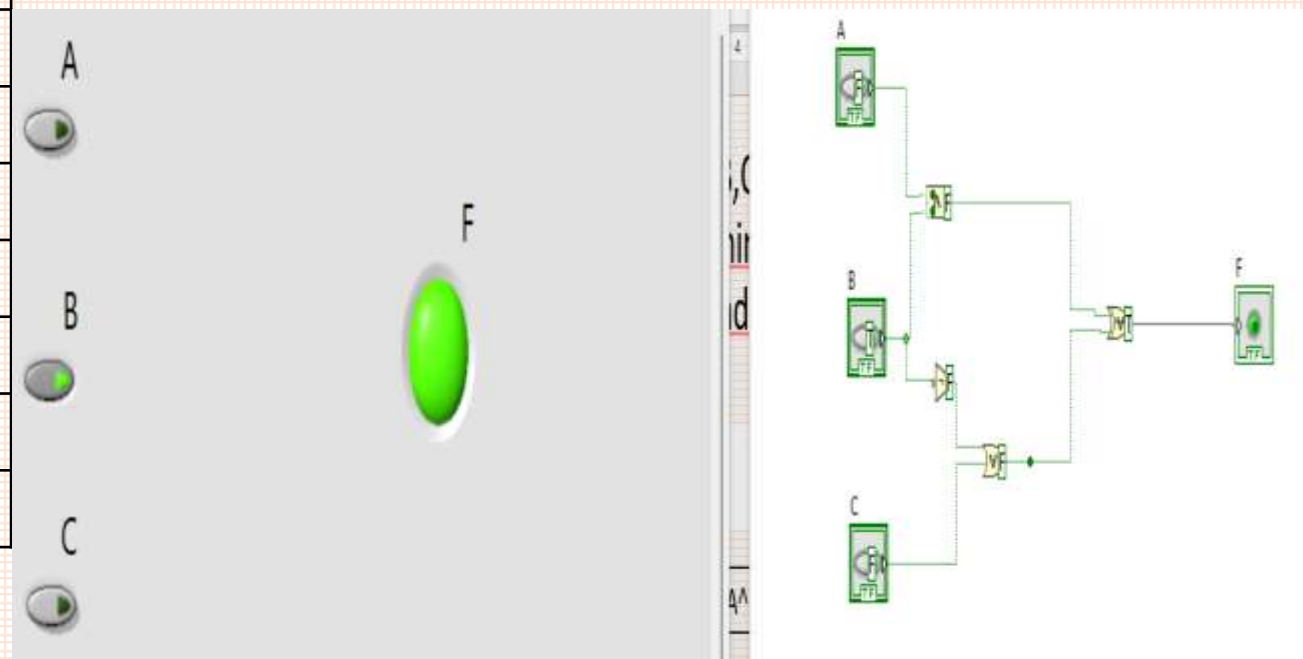

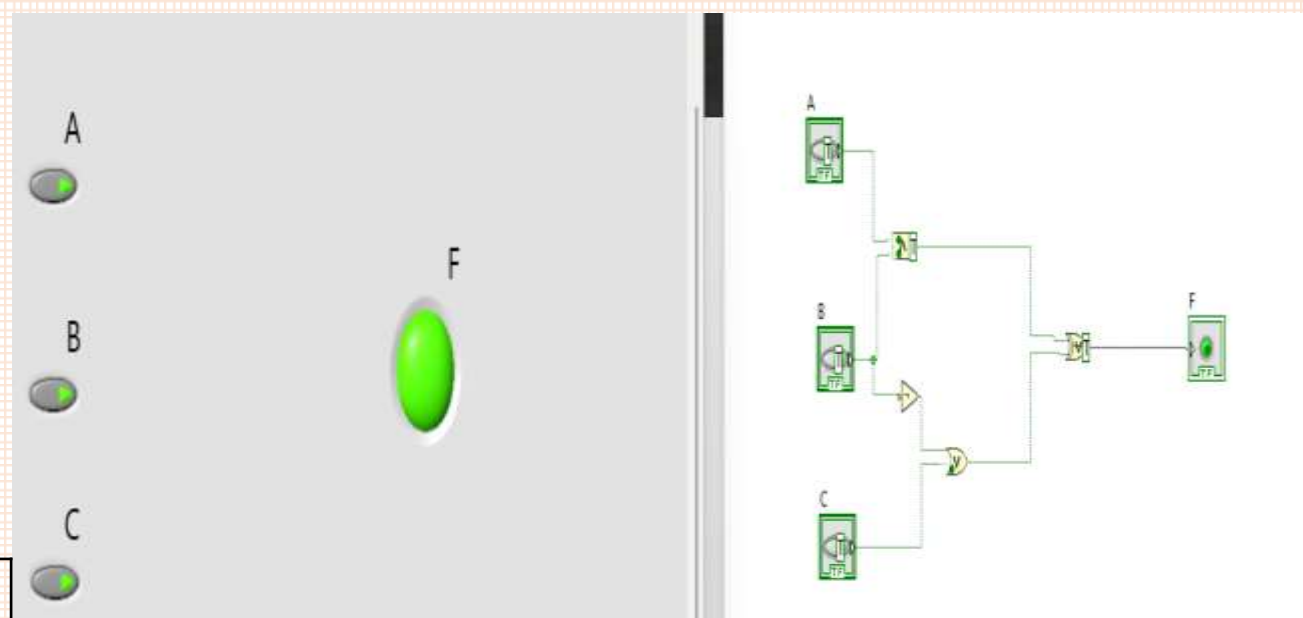

Natijada quyidagi diagramma hosil bo'ladi:

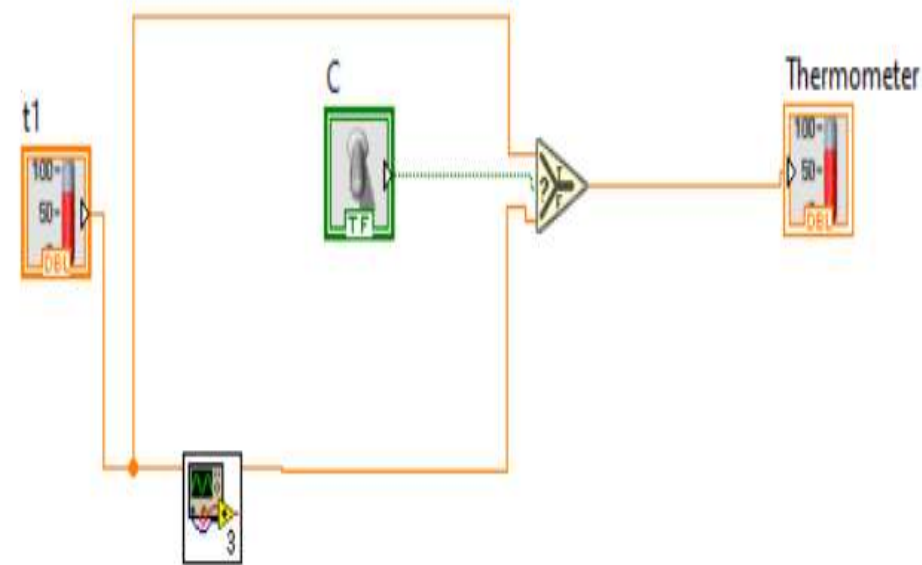

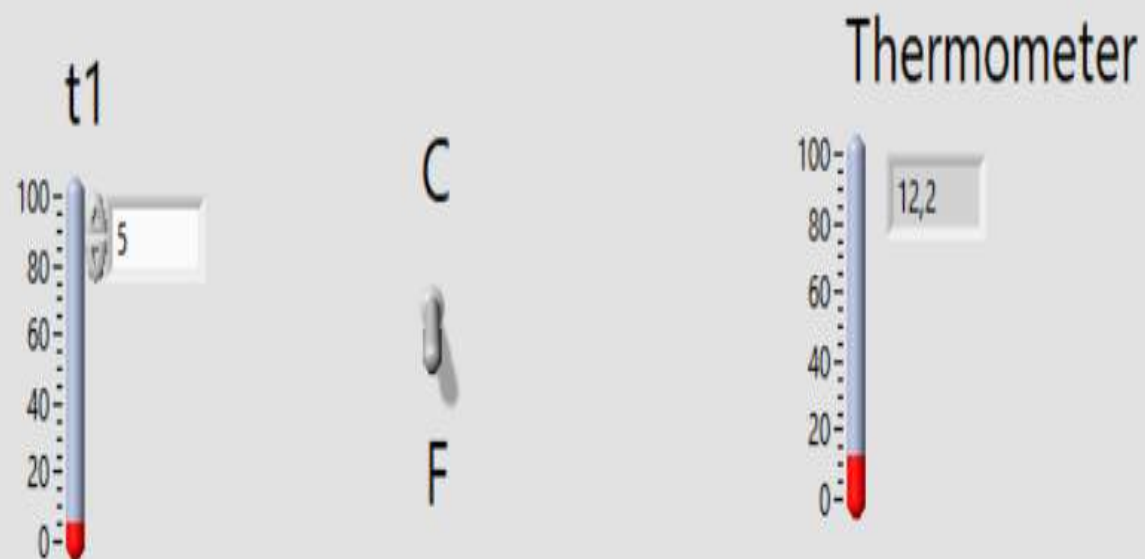

- Dasturni ishga tushiramiz A,B,C larni Rostlik jadvaliga muvofiq o'chirib yoqamiz. Bu ifodani Rostlik jadvalini tuzib olamiz.

$$F = A \wedge B \leftrightarrow \bar{B} \vee C$$

	A	B	C	$A \wedge B$	$\neg B \vee C$	$A \wedge B \leftrightarrow \neg B \vee C$
0	0	0	0	0	1	0
1	0	0	1	0	1	0
2	0	1	0	0	0	1
3	0	1	1	0	1	0
4	1	0	0	0	1	0
5	1	0	1	0	1	0
6	1	1	0	1	0	0
7	1	1	1	1	1	1

Ichki Virtual uskuna yaratish va undan foydalanish
